APA Credits Safety Groups for Record Low Injury Rate

Active Safety Program, Product Testing, and Strict Adherence to Regulations Leads to Lowest Injury Rate Ever

Bethesda, Maryland, June 23, 2008 – Since 1976, when the U.S. Consumer Product Safety Commission (CPSC) promulgated the current federal standards for consumer fireworks, the fireworks-related injury rate has fallen by a startling 91%, setting a 31-year low. Amazingly, this has occurred while fireworks usage has skyrocketed during the same time period. Fireworks usage has increased by almost 960% from 29.0 million pounds in 1976 to over 278 million pounds in 2006, whereas the injury rate has dropped dramatically from 38.3 injuries per 100,000 pounds of fireworks to 3.3 injuries per 100,000 pounds of fireworks.

Julie L. Heckman, Executive Director of the American Pyrotechnics Association (APA) credits the fireworks industry along with safety groups including the American Fireworks Standards Laboratory (AFSL) and the National Council on Fireworks Safety (NCFS) for the sharp decline in injuries. The combined efforts of AFSL and NCFS working with industry, along with thorough enforcement by the CPSC, has helped ensure that the fireworks available today are the highest quality and safest ever made. “The efforts made by these organizations to ensure that only the safest products enter the marketplace and that consumers have access to important safety information, has resulted in an astonishing decline in fireworks injuries. The results achieved to date by these organizations are commendable,” says Heckman.

Added John D. Rogers, AFSL’s Executive Director, “when AFSL was founded in 1989, the level of understanding of and compliance with the U.S. fireworks regulations was alarmingly low. It has taken a sustained commitment by the U.S. industry in reducing the potential risks of injury associated with fireworks, as well as a broad acceptance by the China manufacturers of the AFSL standards and testing program, to achieve the dramatic reduction in injuries and quality improvements that are so evident today.”

“The fireworks industry has witnessed unprecedented growth during the past decade and has responded with an enhanced resolve to ensure that devices are manufactured, distributed and used in a safe manner,” said Heckman. The APA is appreciative and supportive of the roles that

AFSL, NCFS and CPSC have played in reducing fireworks injuries. “We are extremely proud of the dramatic decline in fireworks-related injuries and we look forward to a long partnership with these safety organizations to promote public safety and further reduce fireworks injuries,” Ms. Heckman said.

About the American Pyrotechnics Association

The APA is the leading trade association of the fireworks industry. The APA supports and promotes safety standards for all aspects of fireworks. The APA has diverse membership including regulated and licensed manufacturers, distributors, wholesalers, retailers, importers and suppliers of fireworks industry, facts & figures, and state laws, can be found APA’s website at www.americanpyro.com

About the American Fireworks Standards Laboratory

The AFSL is an independent, non-profit organization established by members of the fireworks industry to reduce the potential risks of injury associated with consumer fireworks products. The AFSL administers design and performance standards developed and maintained by its Standards Committee comprised of representatives from the fireworks and insurance industries, federal and state regulatory authorities, consumers and technical experts. Additionally, the AFSL tests fireworks products for its members at the factory level in China to confirm conformance with its standards prior to export to the United States. Additional information about the AFSL can be found on their website at www.afsl.org

About the National Council on Fireworks Safety

The NCFS is a charitable organization whose mission is to educate the public on the safe and responsible use of fireworks. The NCFS conducts educational safety campaigns and produces safety materials aimed at educating the public, media and public safety officials about the safe use of fireworks. Additional information about the NCFS can be found on their website at www.fireworksafety.com
